QF-Test training at your site: Well supervised from the beginning

The main advantage of on-site consulting and training is its individual nature. Except for basic training examples, training will be performed directly on **your** application and in your environment. In addition, a larger number of colleagues will be able to attend such a training. For optimal success of the training we recommend all participants to familiarize a bit with QF-Test in advance.

The following tables show exemplarily the training subjects of the **basic** and **advanced course**. It is an overview and can be adapted individually. The advanced course (recommended some weeks after the basic course) with the main topics chosen by you and your trainer can take place at your site, via webinar or by contingents (that may be called if required). We offer this training also as **Compact course** with a duration of 4-5 days.

Basic course, Day 1-3

Creating and executing tests, Reading results and reports	Efficient and maintainable tests, Organisation of projects, Component recognition	Extending standard functionality, Gain practical experience
<ul style="list-style-type: none"> • Installation, structure and use of QF-Test • Creation of a test case • Verification by checks • Test results with run-logs and reports • Modularization with variables and procedures • Debugger • Data-driven testing 	<ul style="list-style-type: none"> • Control structures • Component recognition • Distributed test development and working in a team • Ensuring prerequisites and post conditions („Dependencies“) • Recovery management • Test documentation • Test execution via batch and daemon mode 	<ul style="list-style-type: none"> • Extending functionality via scripting (Jython/Groovy/JavaScript) • Hints for starting a project • QF-Test community • Testing PDF documents • Creation of example test cases on your application • Prospects on specific topics for test optimization • Recommendation of further steps on your application
Audience: Novices, new customers, business testers, tool experts, developers		

Advanced course, Day 4-5

(e.g. 4-6 weeks after the basic course)

Advanced subjects, Special cases, Specific topics on your application, Your individual focus, Review
<ul style="list-style-type: none"> • Optimizing existing test structure • Optimizing component recognition using resolvers and generic components • Test creation by Keyword-driven Testing und Behavior-driven Testing (BDT) • Load testing • Advanced aspects of scripting and extension interfaces of QF-Test • Questions and answers
Audience: Experienced users, business testers, tool experts, developers

Prices for training and consulting at your site depend on the duration, number of participants and distance. Training licenses will be provided by QFS if required. For offers, registration or questions please send an email to training@qfs.de or call us at +49 8171 38648-10.

This offer is targeting corporate customers only. On-site training and consulting for QF-Test are based solely on our Training and Support Services Agreement available at <https://www.qfs.de/en/contact/terms-conditions.html>.
